1. LCWS in Arlington:

Wei-san discussed on the source session of LCWS12 at Arlington. (There was no presentation file.)

We will have one day source session for both ILC and CLIC; 1/2 day for ILC and 1/2 day for CLIC.

The ILC session will consists of update of studies and TDR discussions.

About the CLIC, since Louis (the convener of the CLIC source) retired, we will use the CLIC session to make summaries of the current status. The issue is who can come and make the summaries. Wanming-san can make the summary of the CLIC undulator option. But for other schemes we need to find presenters.

2. Questions on Collimation and Polarization:

Eugene-san submitted the question; Why collimation helps getting better polarization in the undulator scheme, while collimation has no significant effect on polarization in the Compton scheme?

Please look at "20120927-Eugene_CollimQuest".

We made discussion on the question, but we did not

reach the conclusion.

Wei-san proposed that Andrei-san and Wanming-san will make study.

Reported by T. OMORI

We will have no meeting in October.

We made tentative decision on the date of the next phone meeting; it was November 20th (Tue.). Since many colleagues were absent, the decision was tentative. Omori will ask people their convenience via e-mail.
